0.75

1.00

Tip-Density Experiments aim to up-weight outboard slices during training to compensate for this extreme structural gradient acceleration.

74× Structural Gradient Acceleration

1.6×10^{-3}
(Tip gap: slice 14→15)

Flat inboard region
($2 - 7 \times 10^{-6}$)

—○— MSD between adjacent slices
74× structural gradient acceleration

Spanwise slice position (slice index)
